Pocket Notebook
PN-71-00-00

This undated pocket notebook is the second of two books that were probably used by Edison in January 1871. Most of the entries relate to automatic telegraphy, particularly the design of an electric perforator. In addition, there are several miscellaneous drawings and calculations. The cover is missing. The pages are unnumbered, and several pages have been torn from the book. Approximately 25 pages have been used.
